

CAPABILITY STATEMENT

About Us

Overview

Established in 2007, Powerup is a proven innovative service provider created to efficiently deliver project management, and the construction of civil electrical and electrical reticulation in all new land subdivisions, in accordance with Ergon Energy's Customer Initiated Capital Works contestability framework.

The Business has grown steadily on the back of repeat business, word of mouth and satisfied developers. Staff numbers have increased significantly over the last two years, leading to the recent opening of branches in both Mackay and Townsville. We attribute continuing growth throughout the business, to our high standards of workmanship, backed by a certified Quality Management System, a clear focus on safety and continuous investment in staff, new machinery, tools and equipment.

Strengths

Our method of operation is proactive, professional and customer focused.

Every member of our team is safe, experienced, trained and licensed.

Powerup provides full service to our customers, from project management, design, construction, through to test and commission.

Why Us

What sets Powerup apart from its competitors?

We understand and care about our individual customers' needs and expectations, by listening and communicating well. This, combined with our can-do attitude, has enabled us to build and maintain good business relationships with our customers.

Strategic planning, good management and sensible investment in staff and equipment has, by default, earned us a reputation as being resourceful, efficient and versatile. We have very experienced staff with varying trade and non-trade qualifications and skills.

We have all the equipment on hand to complete the job. Our machines and equipment are modern, well maintained and always ready to go. Our trucks are all multipurpose and fitted with Hiabs. We can mobilise quickly and can carry out all aspects of the job or project 'in house', which gives us an edge over our competitors.

Our Management Team

Bryan Harries

Director

Founding Powerup in 2007, Bryan is an electrical contractor, having owned and operated Reef Electrical, a domestic and commercial electrical contracting business, in Airlie Beach since 1993.

Bryan has also been actively involved in the roll out of reticulated underground power in a number of leading private community title estate developments in the Whitsundays. With a wealth of civil electrical and electrical experience, Bryan has overseen the measured growth of Powerup into one of the region's most consistent and reliable accredited project management, and electrical contracting firms in the Ergon Central and Northern Regions.

Luke Green

Director

Luke brings over 30 years' experience in the electrical industry, the most recent of which with Ergon Energy as an Advanced Connections Officer. With trade certification ranging from electrical fitter / mechanic and electrical Linesman to HV Switch Operation, there is none better qualified to manage the business. Having undertaken extensive contracting and public sector work in Queensland and in New South Wales, in an extremely diverse range of applications, Luke has both practical and technical experience in the installation and supervision of major electrical infrastructure projects.

Stuart Bell

Director

Co-founding Powerup in 2007, Stuart's background is in law, and he has been involved in law practice, in the Whitsundays, since 1991. Stuart has, in recent years, practiced exclusively in property development related law, concentrating on residential freehold and community title estates. In this capacity, he has dealt exclusively with local and state authorities including Ergon Energy, civil contractors, design engineers, town planning consultants, urban designers and surveyors on all levels of property development from acquisition through to completion of developed land.

Ben Hall

Operations Manager

Trade qualified electrician and master cabler with 18 years of extensive experience, working across a broad range of commercial, industrial and domestic projects. Ben is responsible for the efficient delivery of our various works in all stages from pre-start through to sign off. A respected industry perfectionist, Ben is on-site and involved every day on each job to ensure that works are completed efficiently.

Our Services

Utilities Sector

Powerup has been fortunate enough to carry out work for, and together, shoulder to shoulder with the crews and management of Queensland's major utility companies such as Ergon, Telstra, Department of Transport and Main Roads and Origin Energy, during the delivery of our projects. Those experiences, combined with our staff, a number of whom were previously employed by such companies, have given us the knowledge and understanding to tailor our business specifically for their needs and expectations.

We Offer

- Roadway lighting, design, maintenance and construction
- Electrical underground reticulated design, maintenance and construction
- Telstra and NBN design maintenance and construction
- Civil electrical construction
- Electronic locations and potholing
- Materials supply and handling
- Horizontal Directional Drilling

Our Equipment

- Vermeer Hydrovac 1200 Gallon
- Ditch Witch Hydrovac 800 Gallon
- Excavators 5, 1.8, 3.8 & 9 Tonne
- Ditch Witch Directional Drill
- Bobcat
- Tipper with drop sides and HIAB
- Crane truck
- Location equipment
- Cable winch
- 2 x cable handling trailers
- Pumps, Wacker packers, quick cut saws, vibrators, temporary fencing

Project Management

Working with the developer, Ergon and civil contractors, we coordinate the entire installation of the civil-electrical and electrical works required for proposed subdivisions, from pre-start to certificate of acceptance. We are Supply Authority endorsed for project management, civil supervision and auditing services.

Civil-Electrical Construction

With its own civil plant and machinery, and trade qualified electrical contractors, Powerup has the capacity and experience to correctly and safely install all civil-electrical materials, including conduit (electrical and NBN Co.), substation, switch and street light foundations necessary to complete contestable works of all sizes.

Electrical Construction

We supply materials, construct and install all internal underground reticulation and associated infrastructure including HV equipment, cabling and public lighting for proposed developments.

Interaction with developer's consultancy team

Uniquely, with our hybrid experience, we liaise directly with the developer's project coordination group, including surveyors, civil and electrical engineers, council and the developer, to ensure that prospective services installed by us are planned and rolled out efficiently. We do not simply react to requests but actively pursue results to avoid delays.

Our Services

Successful Projects

Powerup have amassed an impressive list of regional clientele, having completed recent developments across the Mackay, Whitsundays and Townsville regions.

Below is a select few to mention;

Occupational Health & Safety

Powerup is committed to providing a safe work place for employees and subcontractors.

All employees are made aware of Powerup's safety system through regular safety meetings, on-site inductions, toolbox talks and use and understanding of Safe Work Method Statements (SWMS).

Management Systems

Powerup has developed and implemented a quality management system, certified to ISO 9001 Standards. Our work methods follow exacting standards and all projects are audited throughout the build and on completion. We have always trusted our methodology and systems, in place since 2007, and have been validated with the ISO 9001 tick of approval.
